

OFFICINE MECCANICHE GIOVANNI CERUTTI SPA

CERUTTI GROUP AT CONVERFLEX AS A MAIN PLAYER

Cerutti Group's attendance at Converflex will be marked by a typical Italian style stand, headquarter of the brands that are part of the Casale Monferrato based family. Officine Meccaniche Giovanni Cerutti will show the successful R980 gravure press, latest born of the printing line for packaging materials that was launched in spring 2007: Cerutti personnel will be available to illustrate all the technical evolutions and improvements achieved; the R980 press combines versatility and easiness of use with its solid sturdiness that is a distinguishing feature of the Cerutti products. The Spanish company Iberica will present the visitors its new Optima OP 105 die cutter, 75x105 cm, for paper, carton board, microflute and plastic materials, featuring 8.500 sheets/hour maximum speed. Flexotecnica will exhibit in preview a C.I. printing deck for flexible materials, paper and carton board, named FX; this machine – 8 or 10 colours, printing widths from 800 to 1.600 mm and repeat ranges from 350 to 1.070 mm – will feature 400 mt/min maximum speed and belongs to the new sleeve gearless flexographic presses developed by Flexotecnica. Don't forget to visit Cerutti Group stand: these and other innovations still in the pipeline are ready to amaze you!
