

## SAMIXCOLOR SRL

SAMIXCOLOR SRL is a company specialized in the field of inks for flexible packaging for Roto and Flexo printing and some years ago started the production of CHIPS.

Thanks to the use of suitable and up-to-date equipments and thanks to a competent technical staff, SAMIXCOLOR succeeded in entering the market of CHIPS with a good quality product that guarantees excellent usage and printing results.

CHIPS are pigment dispersed in resins which varies according to their usage. They have the shape of flakes and are directly mixed with technological varnishes. The most significant advantages of the production of INK with CHIPS compared to the use of pigments are:

- Better brightness
- Higher execution speed
- Good concentration
- Good pigment refinement

Moreover the use of CHIPS doesn't produce dust because of their shape, contrary to pigment productions.

CHIPS can be used in the field of inks, enamels, varnishes, plastic substances coloration, textile industries, leather and imitation leather coloration.

Our collaborators are at your disposal to answer any of your questions about the product performances and applications.

You are invited to enter our web-site for more information technicals.
