

SCHOBER GmbH

SCHOBER: QUALITY AT YOUR SERVICE

Schober, founded almost 60 years ago, is worldwide known as an industry leader in the development and production of rotary tools, built-in modules and special machinery for the paper, film and foil converting industry.

Thanks to the consistent expansion of new production processes into the Schober product line, today the Company is able to offer solutions in following markets:

- Business Forms Industry
- Label Industry
- Packaging Industry
- Hygienic/Nonwovens Industry
- Medical and Electronical Industry

During Converflex 2009, a wide range of the Schober product program will be presented:

Technical solutions and concepts for RFID Products

The latest RFID development is the CP (Card Processor), especially suitable for contactless readable tickets for public transportation and access tickets as well as anti-theft tags, and prevention of counterfeiting.

Rotary cutting machine, type RSM

to convert pre-printed OPP roll material (in-mould label), PE coated paper and composite material. Several different delivery options are available.

Multilayer product processor MLPP

The perfect machine for the production of high precision and self-adhesive elements used in the automotive, telecommunication and electronic industry. The machine consists of 9 processing stations for cutting, punching, laminating, delaminating and last but not least our latest development, Cut & Place.

PBO Off-Line Rotary Converting System for folding carton and packaging blanks such as HL and RCB cigarette packaging, DC cartons as well as blanks for the liquid packaging market.

Autostack extremely suitable for applications with high performance machines to individually count and stack folding cartons, packaging blanks, paper and laminate cut-outs, and paper filters.

In-Line High Performance Converting System consisting of punching and creasing modules with servo drive for the liquid packaging market.

Vector Technology, the perfect solution for profile punching, perforating or cross cutting of multiple product patterns in roll printing presses or converting machines.

Rotary Cutting and Creasing Tools .
