

SCS AUTOMABERG SNC

THE SPECIALISTS IN CUSTOMISED SOLUTIONS FOR BOOKBINDING AND FINISHING

In an increasingly selective market it is essential to have ever more custom tailored products. It is accepted that the drive to find new production concepts brings with it important advantages. Construction of systems, tooling and machinery to optimise the whole production cycle
With regard to components, our priority is to use only high quality. We also have a well-equipped mechanical workshop that allows us to produce entire systems in-house.

All of this enables us to provide any type of automated system from simple conveyors to the most sophisticated robotic applications.

EASY FLY: Automatic Inline Single Knife Trimmer, to face trim perfect bound and thread sewn soft cover books with flaps. Easy Fly accomplishes the opening by working in the trim-away area of the book, thus avoiding any damage whatsoever to the cover.

EASY FLY DIGIT, this face trimming unit is the challenge for the digital market. The tradition of the high performance : 4000 cycle/hour makes this unit the ideal solution for the **BOOK ON DEMAND**

TRIM & PERF: An extremely versatile and productive line. Ideal for operation in-line with sheet folders or saddle stitching units to perforate and/or cut (with or without trim out), or off-line with separate feeders.

CORNER MASTER: Round corner machine for hard cover books and diary cases. Cases, freshly made on any case maker, are fed manually by hopper feeder or automatically in-line onto the in feed conveyor of the **CORNER MASTER** unit and brought into position in its round cornering station.

2 HEAD CORNER ROUNDING, the Master originates the two head semi-automatic unit. By introducing the covers the 2 heads come down to round the corners. The machine will meet with the needs of the small-medium production.

CORNER TRIM: Automatic corner cutter for soft and hard cover books. The machine can be directly connected to a three-knife trimmer.
