COLOR MEASUREMENT AND COLOR CALIBRATION

TECHKON SpectroPlate videocamera for CTP plates in three versions Basic, Expert and All Vision for process less plates. Measure aims of landing-net thin AM 380 lpi cm, FM 10 microns size and hybrid raster %, frequency, angle and diameter of the dot. The system is independent from the PC to which it can connect with the software SpectroPlate Connect included. SpectroDens the spectro-densitometer available in four models Start, Basic, Advanced, Premium, upgrade in any moment to the superior versions. The most advanced functions of color analysis for densitometric and colorimetric measurement among which the new ones: ISO Check for the certification ISO 12647-2 of the press; Espresso Mini for the profile of the ink fount. In memory 1000 references and 250 champions. The software SpectroDens Connect furnished of series. SpectroDrive the scanning motorized spectro-densitometer and wireless for the regulation of the sheet offset press up to the format 205 cm. They are available two versions of the software Express 3 Basic-Densitometric and Pro-Spectro Densitometric. In few seconds the sheet is measured and is certified it to norm ISO 12647 -2. It furnishes manifold information among which: color profile gamut and curves for the calibrazione of the CTP.

BARBIERI ELECTRONIC

Spectro Swing "R" fully automatic spectrophotometer for reflection for the measure of color flexible target up to 0,7 mm of thickness and the automatic profiling without operator handling. It is upgrade to the version Spectro Swing "RT" for the measure in transmission mode. Spectro LFP automatic spectrophotometer for the measurement of all the types of flexible and rigid, opaque and transparent materials up to 20 mm of thickness. The tools are furnished of series with the standard software Gateway for MAC and PC. Profile-Xpert 3C, Profile-Xpert 4C and Profile-Xpert Print+ are the programs for the creation of ICC profiles of high quality for the proofing, the digital and conventional press.
